

# Tibet

## Climate Crisis

Often referred to as the “roof of the world,” Tibet is also less commonly known as the world’s “third pole.” Here are three facts about Tibet that everyone should know:

1. Tibet’s glaciers contain the world’s largest reserve of freshwater outside of the North and South Poles: nearly *two billion* people living in Asia rely directly on Tibet’s rivers for sustenance.
2. Tibet is warming at a rate up to three times faster than the global average in many regions, and over two times faster throughout
3. Some of Tibet’s most vulnerable regions, such as riverbeds and grasslands, are desertifying at rates of up to 10% per year.

*Tibet is melting at  
3x the rate of the  
rest of the world*
